

# Smappee configurator plugin

# Embed Smappee configurator in your website

The following steps describe how to embed the Smappee configurator as a plugin in your website.

**1 Copy configurator.js and configurator.css to your server.**

Copy the configurator.js and configurator.css to your server. If you want the text displayed in the plugin to appear in the Smappee font, copy the fonts directory as well.

All files must be in the same directory.

**2 Import configurator.js and configurator.css.**

- Add `<link rel="stylesheet" href="configurator.css" type="text/css" />` to the page head.
- Add `<link rel="stylesheet" href="fonts/DINPro.css" type="text/css" />` to the page head if you want to use the Smappee fonts.
- Add `<script src="configurator.js"></script>` to the page (head or body)

**3 Provide an empty element on the page.**

Provide an empty element on the page: `<div id="myconfigurator" />`

**4 Add a script to load the configurator.**

Add a script to load the configurator to the page: `<script type="text/javascript">window.onload=function(){loadConfigurator("myconfigurator")}</script>`

The Smappee configurator is now embedded onto your website and available for your website visitors.

Download configurator.css, configurator.js and fonts via the Smappee Partner Portal [here](#).
